

AMENDMENT TO CLAIMS

Please replace the claims, including all prior versions, with the listing of claims below.

Listing of Claims:

1. (Previously presented) An image processing method, comprising:
judging whether correction of image data of a color image is necessary based on a quality of sunset scene, the color image covered with a specific color, contrast and sharpness of the whole area of the image data; and
performing a predetermined correction processing on at least a portion of the color image based on the judgment of the quality of the image data, unless judged that correction processing is not necessary.
2. (Original) An image processing method according to claim 1, wherein the necessity/nonnecessity of correction is judged based on the whole area of the image data.
- 3-6 (Canceled)
7. (Previously presented) An image processing method according to claim 1, wherein the necessity/nonnecessity of correction is judged based on the items pieced together.
8. (Previously presented) An image processing apparatus, comprising:
a memory which stores an image data of a color image;
a judge section which judges whether correction of the color image based on a quality of sunset scene, the color image being covered with a specific color, contrast and sharpness of the whole area of the image data; and
a correct section which performs a predetermined correction processing on at least a portion of the color image based on a judgment of the quality of the image data by the judge section, unless the judge section judges that correction processing is not necessary.

9. (Original) An apparatus according to claim 8, wherein the judge section judges based on the whole area of the image data.

10-13 (Canceled)

14. (Previously presented) An apparatus according to claim 8, wherein the judge section judges the necessity/nonnecessity of correction base on the items pieced together.

15. (Previously presented) A recording medium with a recorded program, the program performing:

judging whether correction of image data of a color image is necessary based on a quality of sunset scene, the color image being covered with a specific color, contrast and sharpness of the whole area of the image data; and

performing a predetermined correction processing on at least a portion of the color image based on the judgment of the quality of the image data, unless judged that correction processing is not necessary.

16. (Previously presented) An image processing method according to claim 1, further comprising:

converting color components R, G and B of the image data into hue data, lightness data and saturation data,

wherein the hue data, lightness data and saturation data are used on the judgment of the quality of the image data.

17. (Previously presented) An apparatus according to claim 8, further comprising:

a converter which converts color components R, G and B of the image data into hue data, lightness data and saturation data,

wherein the hue data, lightness data and saturation data are used in the judgment of the quality of the image data of the judge section.

18. (Currently amended) An image processing method which is correction processed for ~~[[two]]~~ three or more items about a quality of color image data, comprising:

judging a necessity/nonnecessity of correction of image data of a color image individually with respect to ~~[[two]]~~ three or more of the items regarding the quality of the image data; and

performing a correction transaction corresponding to the item about the item judged as a correction being required during judging, unless judged that there is a nonnecessity of correction.

19. (Previously presented) The image processing method according to claim 18, wherein the judging judges whether a contrast and sharpness of a picture image are unusual such that the picture image is color cast, wherein the performing the correction transaction is performed for correcting color cast when judged with the picture image color casting, and performing an edge enhancement correction of a picture image when it judges that the contrast and sharpness of picture image are unusual.

20. (Currently amended) An image processing apparatus which is correction processed for ~~[[two]]~~ three or more items about a quality of color image data, comprising:

a judgment manager to judge whether a correction is necessary individually about each item; and

a correction manager to perform a correction transaction corresponding to the item about the item judged as a correction being required with the judgment manager, unless the judgment manager judges that correction processing is not necessary.

21. (Canceled)
